Encapsulated motor 0.37 kW to 45 kW

Direct-on-Line starting is recommended up to 7.5 kW.

Soft starter or auto transformer is recommended above 7.5 kW.

## GENERAL DATA

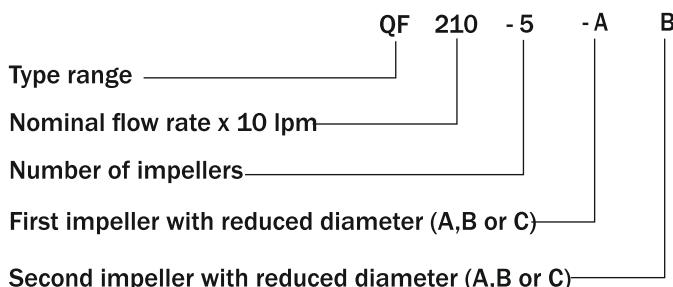

### APPLICATIONS

The pumps are suitable for the following applications :

- Raw water supply
- Irrigation systems
- Groundwater lowering
- Pressure boosting
- Industrial applications

### TYPE KEY

Example

### PUMPED LIQUIDS

Clean, thin, non-aggressive liquids without solid particles or fibres.

### OPERATING CONDITIONS

Flow rate, Q : 0.1 - 280 m<sup>3</sup>/h.

Head, H: Maximum 670m.

Maximum Liquid Temperature:

Motor	Installation		
	Flow velocity-past motor	Vertical	Horizontal
Shakti 3",4",6" & 8"	0.15 m/s	40°C	40°C

Operating pressure: Maximum 0.67m (67 bar)

### CURVE CONDITIONS

The conditions below apply to the curves shown on the following pages :

#### GENERAL

- Curve tolerance according to ISO 9906, Annex A.
- The performance curves show pump performance at actual speed cf. standard motor range.

The speed of the motors is approximately :

3" motors : n=2850 min<sup>-1</sup>

4" motors : n=2870 min<sup>-1</sup>

6" motors : n=2870 min<sup>-1</sup>

8" to 12" motors : n=2900 min<sup>-1</sup>

- The measurements were made with airless water at a temperature of 20°C. The curves apply to a kinematic viscosity of 1 mm<sup>2</sup>/s. When pumping liquids with a density higher than that of water, motors with correspondingly higher outputs must be used.
- The bold curves indicate the recommended performance range.
- The performance curves are inclusive of possible losses such as non-return valve loss.

### Q-3, QF1, QF2, QF5, QF6, QF12, QF20, QF25 CURVE

- **Q/H** : The curves are inclusive of valve and inlet losses at the actual speed.
- **Power Curve** : BPkW/Stage shows pump power input per stage.
- **Efficiency Curve** : Efficiency shows pump stage efficiency.

### QF10, QF15, QF30, QF50, QF75, QF100, QF125, QF160, QF210, QF270, QF360 CURVE

- **Q/H** : The curves are inclusive of valve and inlet losses at the actual speed.
- Operation without non-return valve will increase the actual head at nominal performance by 0.5 to 1.0 m.
- **NPSH** The curve is inclusive of suction case and shows required inlet pressure.
- **Power Curve** : It shows pump power input at the actual speed for each individual pump size.
- **Efficiency Curve** : Efficiency shows pump stage efficiency.

## FEATURES AND BENEFITS

### A WIDE PUMP RANGE

We offers submersible pumps with energy efficient duty points ranging from 0.1 to 335 m<sup>3</sup>/h. The pump range consists of many pump sizes and each pump size is available with an optional number of stages to match any duty point.

### HIGH PUMPS EFFICIENCY

Often pump efficiency is a neglected factor compared to the price however, the observant user will notice that price variations are without importance to water supply economics compared to the importance of pump and motor efficiencies.

### EXAMPLE:

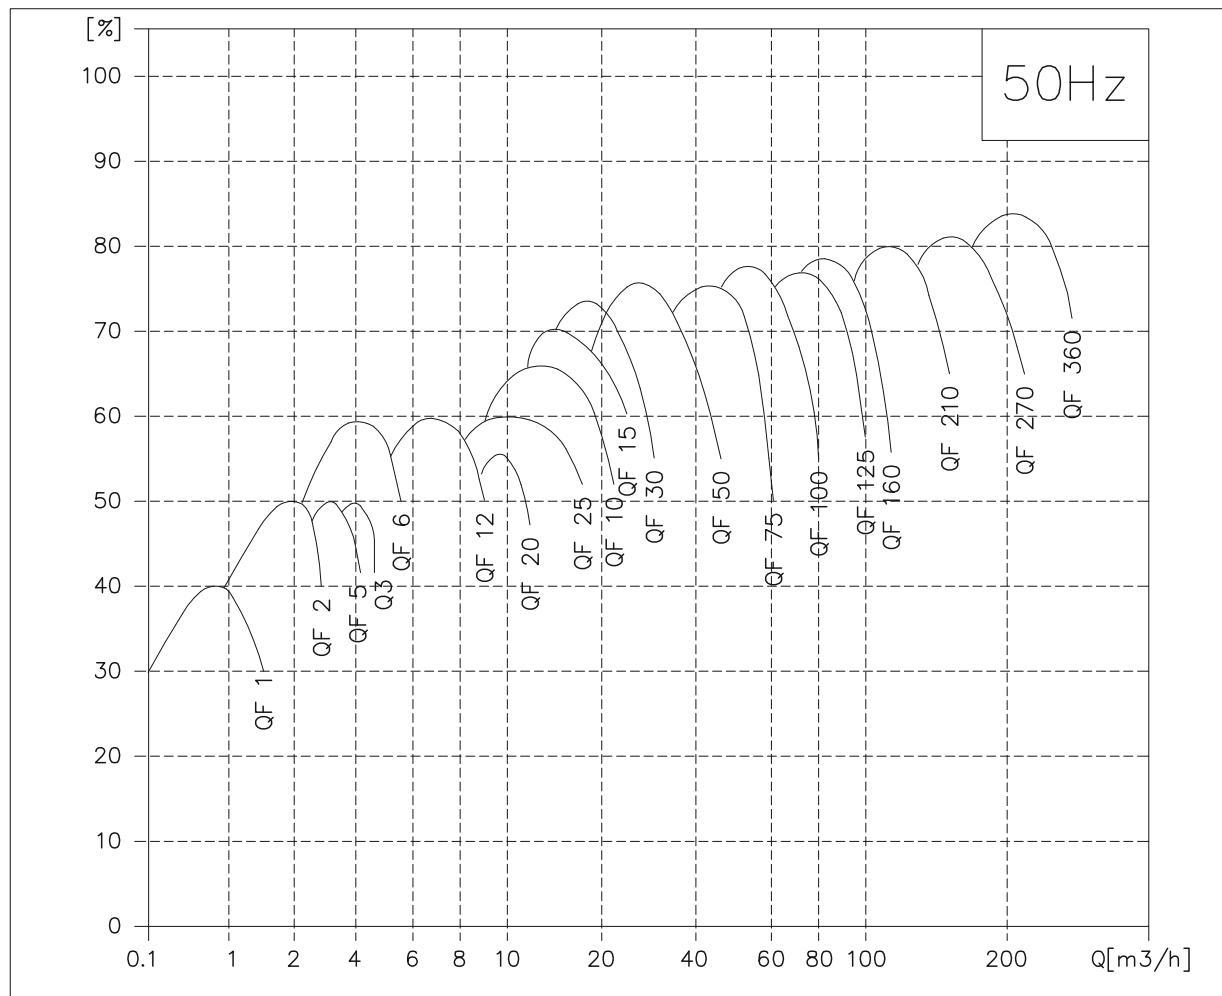

When pumping 125 m<sup>3</sup>/h with a head of 200m for a period of 10 years \$ 60,000 will be saved if a pumps and motors having a 10% higher efficiency is chosen and the price is \$ 0.10 per kWh.

### APPLICATIONS

We offers a complete range of pumps and motors which as a standard are made completely of stainless steel AISI - 304. This provides for good wear resistance and a reduced risk of corrosion when pumping ordinary cold water with a minor content of chloride.

### LOW INSTALLATION COSTS

Stainless steel means low weight facilitating the handling of pumps and resulting in low equipment costs and reduced installation and service time. In addition pumps will be as new after service due to the high wear resistance of stainless steel.

## SUBMERSIBLE PUMPS

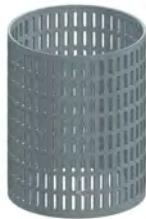

### BEARINGS WITH SAND CHANNELS

All bearings are water-lubricated and have a square shape, enabling sand particles, if any, to leave the pump together with the pumped liquid.

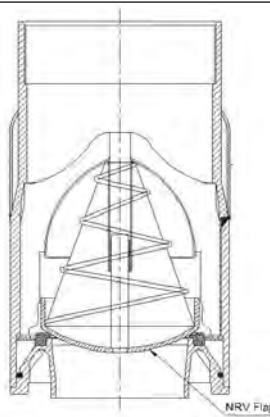

### INLET STRAINER

The inlet strainer prevents particles over a certain size from entering the pump.

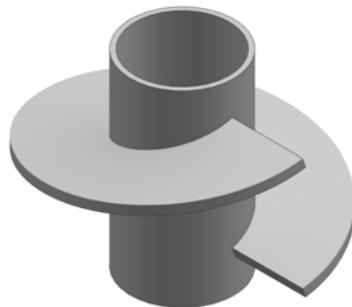

### NON - RETURN VALVE

All pumps are equipped with a reliable non-return valve in the valve casing preventing back flow in connection with pump stoppage. Furthermore, the short closing time of the non-return valve means that the risk of destructive water hammer is reduced to a minimum. The valve casing is designed for optimum hydraulic properties to minimize the pressure loss across the valve and thus contributes to the high efficiency of the pump.

### PRIMING SCREW

All QF and QF 30 pumps are fitted with a priming screw. Consequently, dry running is prevented because the priming screw will make sure that pump bearing are always lubricated. Due to the semi-axial impellers of large QF pumps (except for QF 30) this priming is automatically provided. However, it applies to all pump types that if the water table is lowered to a level below the pump inlet neither pump nor motor will be protected against dry running.

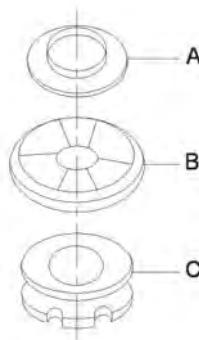

### STOP RING

The stop ring prevents damage to the pump during transport and in case of up-thrust in connection with start-up. The stop ring, which is designed as a thrust bearing limits axial movements of the pump shaft.

#### EXAMPLE : QF 125

The stationary part of the stop ring (A) is secured in the top bowl (Upper intermediate chamber). The rotating part (B) is fitted above the collet [split cone (C)].

### EXAMPLE : QF - 125

## SUBMERSIBLE MOTORS

### FEATURES AND BENEFITS

#### A COMPLETE MOTOR RANGE

We offer a complete submersible motor range

- 3"motors, single phase up to 1.5 kW (Rewindable)
- 4"motors, single-phase up to 4 kW. (Encapsulated & Rewindable)
- 4"motors, three-phase up to 7.5 kW. (Encapsulated & Rewindable)
- 6"motors, three-phase from 2.2 kW to 37 kW. (Rewindable)
- 8"motors, three-phase from 11 kW to 220 kW. (Rewindable)

#### HIGH MOTOR EFFICIENCY

Within the area of high motor efficiency Star is a market leader. This is due to newly developed motor concept which is introduced with the Premium 100, Premium 101 and Premium 150.

#### SHAFT SEAL

The choice of material is ceramic/ tungsten carbide providing optimum sealing, optimum wear resistance and long life.

The spring loaded shaft seal is designed with a large surface and a sand shield. The result is a minimum exchange of pumped and motor liquids and no penetration of particles.

#### PROTECTION AGAINST UPTHURST

In case of a very small counter pressure in connection with start-up there is a risk that the entire pump body may rise. This is called upthrust. Upthrust may damage both pump and motor. Therefore, both pumps and motors are protected against upthrust as standard, preventing upthrust from occurring in the critical start-up phase. The protection consists of either a built-in stop ring or hydraulic balancing.

#### BUILT -IN COOLING CHAMBERS

In all submersible motors an efficient cooling is ensured by cooling chambers at the top and at the bottom of the motor, and by an internal circulation of motor liquid. As long as the required flow velocity cooling of the motor will be efficient.

ENCAPSULATED

REWINDABLE

### FEATURES AND BENEFITS

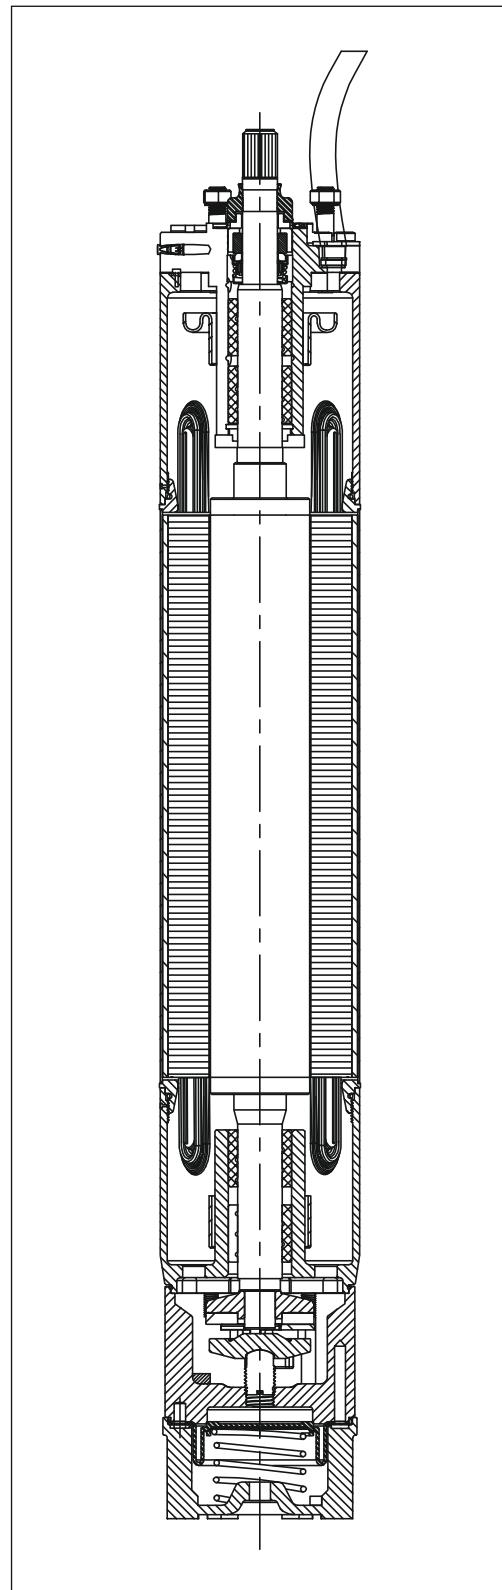

#### OVER TEMPERATURE PROTECTION

For Shakti submersible motors accessories Pt100 for protection against over temperature is available. When the temperature becomes too high, the protection device will cut-out and damage to the pump and motor be avoided.

#### PROTECTION AGAINST UPTHUST

In case of a very small counter pressure in connection with start-up there is a risk that the entire pump body may rise. This is called upthrust. Upthrust may damage both pump and motor. Therefore both Shakti pumps and motors are protected against upthrust as standard, preventing upthrust from occurring in the critical startup phase. The protection consists of a built-in upthrust ring.

\*Maximum diameter of pump with one motor cable

\*\*Maximum diameter of pump with two motor cable

Motor type may change as per requirement

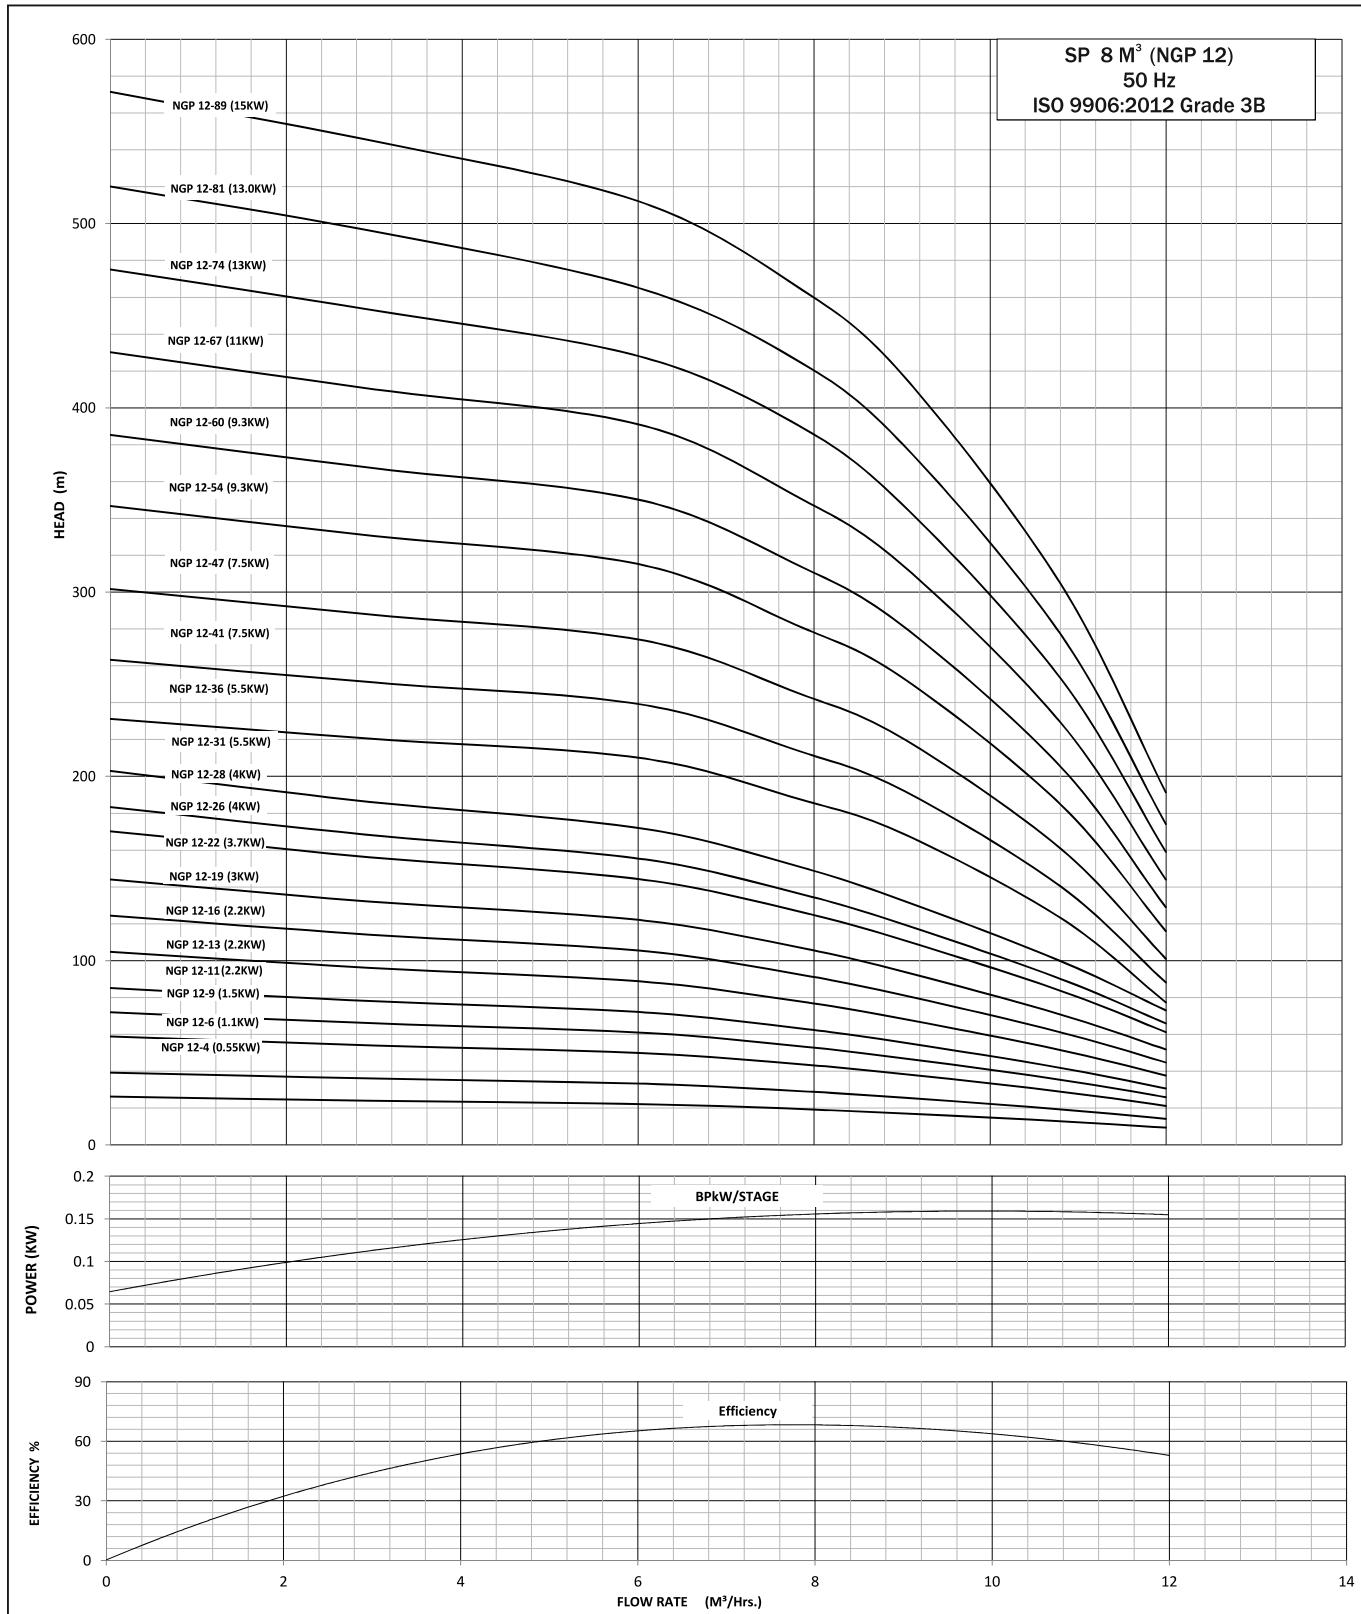

E = Maximum diameter of pump inclusive of cable guard & motor.

\* Maximum diameter of pump with one motor cable.

\*\* Maximum diameter of pump with two motor cable.

Motor type may change as per requirement.

\* Maximum diameter of pump with one motor cable.

\*\* Maximum diameter of pump with two motor cable.

Motor type may change as per requirement.

\* Maximum diameter of pump with one motor cable.

\*\* Maximum diameter of pump with two motor cable.

Motor type may change as per requirement.

\* Maximum diameter of pump with one motor cable.

\*\* Maximum diameter of pump with two motor cable.

Motor type may change as per requirement.

Other type of connection is possible by means of connecting pieces. See page no. 117.

\* Maximum diameter of pump with one motor cable.

\*\* Maximum diameter of pump with two motor cable.

Motor type may change as per requirement.

Other type of connection is possible by means of connecting pieces. See page no. 113.

## V14 PUMPS

### PUMP RANGE

Type	SSP 270	SSP 300	SSP360
Cast Iron	+	+	+
DIN Connection	DIN 175	DIN 175	DIN 175

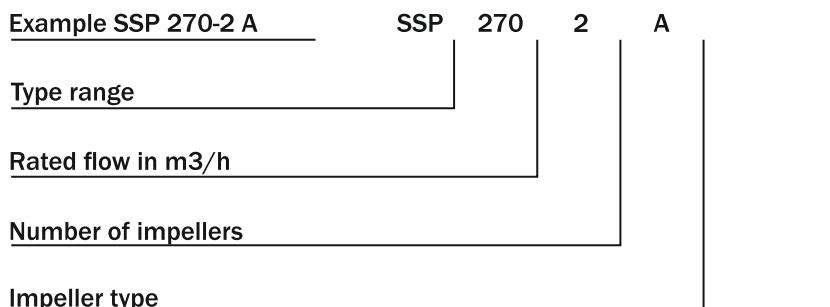

### MOTOR RANGE

Motor Output 1kW]	22	26	30	37	45	55	75	93	110	132	147	170	190	220
Three Phase	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Rewindable Motor	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Steel: AISI 304	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Steel: AISI 304 & Cast Iron	+	+	+	+	+	+	+	+	+	+	+	+	+	+

Soft starter or auto transformer is recommended above 75 kW, see soft starting. The MMS motors can be operated via frequency converter see Frequency converter operation.

Motors with star-delta are available for all motor sizes.

### TYPE KEY

### PUMPED LIQUIDS

Clean, thin, non-aggressive liquids without solid particles or fibers.

Maximum sand contents : 50 g/m<sup>3</sup>

### OPERATING CONDITIONS

Flow Rate, Q : 24-430 m<sup>3</sup>/h  
Head, H : Maximum 410 m  
Operating Pressure : Maximum 60 bar  
Storage temperature : Pump: -20 °C to +60 °C  
Motor: -20 °C to +70 °C.

Motor	Installation		
	Flow velocity past motor	Vertical	Horizontal
8", 10" & 12"	0.15 m/s	40 °C	40 °C

## FEATURES & BENEFITS

### PUMP RANGE

The SSP pump range consists of pumps which can deliver a higher pressure or a higher flow compared to the rest of the QF pump range offered by Shakti.

SSP Pumps are semi-axial pumps. They are suitable for applications requiring a flow up to 430 m<sup>3</sup>/h and a head up to 410 m head.

All pumps are available with an optional number of stages to match any duty point.

### PRODUCT FEATURES

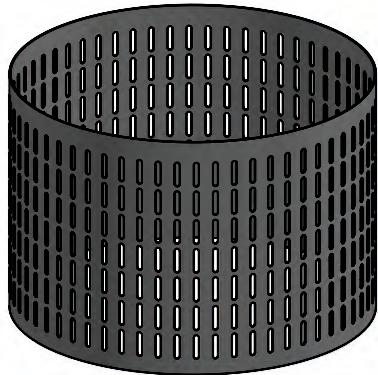

#### Bearings with sand channels

All bearings are constructed in such a way that channels are formed along the shaft enabling sand, if any, to leave the pump with the pumped liquid.

The bearings in SSP Pumps are Octagonal on the inside.

#### INLET STRAINER (Fig. no. 1)

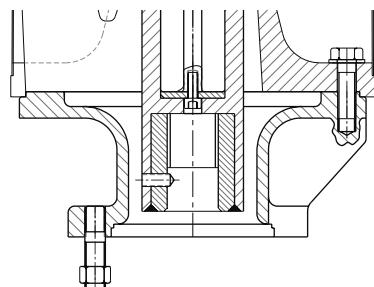

The inlet strainer prevents particles over a certain size from entering and damaging the pump.

(Fig. no. 1)

#### PROTECTION AGAINST UPTHURST (Fig. no.2)

The pump range has a screwed connection between the coupling of the pump and the motor shaft ensuring that upthrust in the pump, if any, is transferred to the stop ring of the motor.

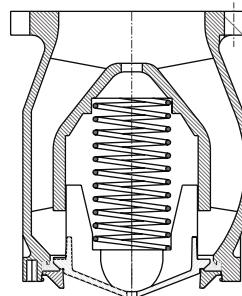

(Fig. no. 2)

#### VALVE CASING (Fig. no.3)

All pumps are equipped with a reliable non-return valve in the valve casing preventing back flow in connection with pump stoppage.

The valve casing is designed for optimum hydraulic properties to minimize the pressure loss across the Valve and thus contribute to minimizing the total pressure loss of the pump.

Furthermore, the short closing time of the non-return valve means that the risk of destructive water hammer is reduced to a minimum.

(Fig. no. 3)

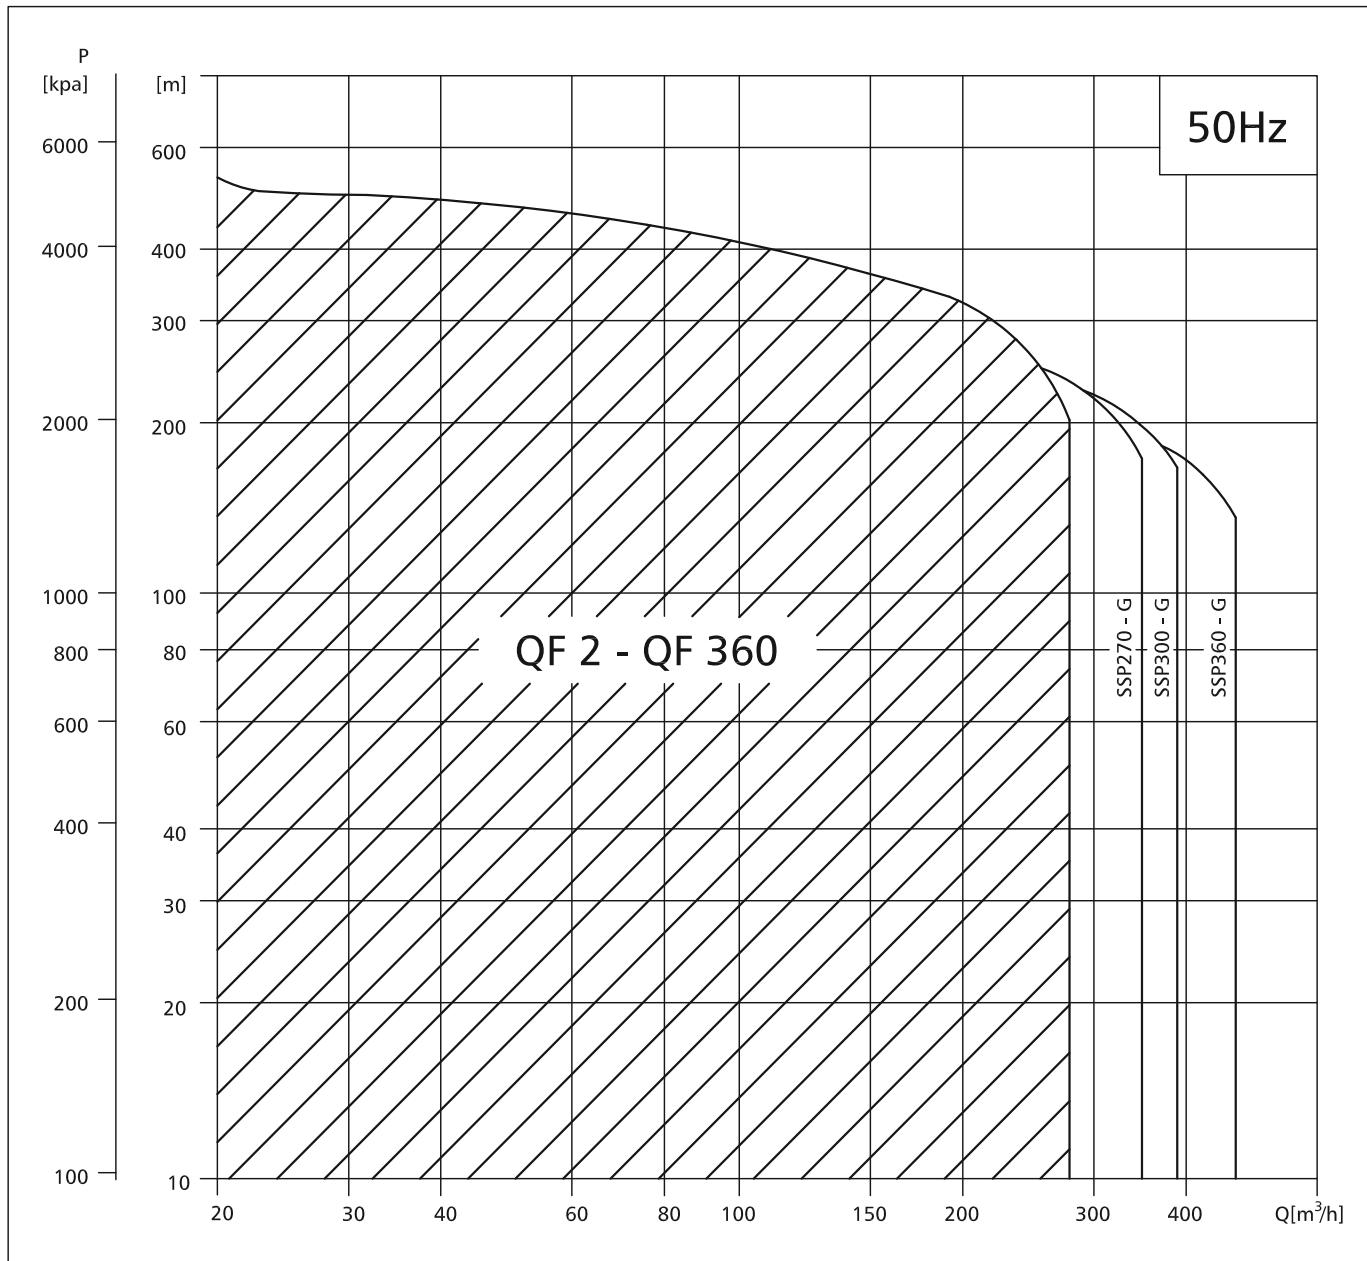

#### NECK RING (Fig. no.4)

All pumps have a replaceable neck ring in each chamber.

This means that the neck ring can be replaced easily in case of wear.

(Fig. no. 4)

300	5000	83.3												4.386 14.42		
90 ° bends, slide valves			1.0	1.0	1.1	1.2	1.3	1.4	1.5	1.6	1.6	1.7	2.0	2.5		
T-pieces, non-return valves			4.0	4.0	4.0	5.0	5.0	5.0	6.0	6.0	6.0	7.0	8.0	9.0		

The table is calculated in accordance with H. Lang's new formula  $a = 0.02$  and for a water temperature of  $10^\circ\text{C}$ .

The head loss in bends, slide valves, T-piece sand non-return valves is equivalent to the meters of straight pipes stated in the last two lines of the table.

To find the head loss in foot valves, multiply the loss in T-pieces by two.

## TABLE OF HEAD LOSSES

### HEAD LOSSES IN PLASTIC PIPES

Max. current for cable [A]\*      23    30    41    53    74    99    131    162    202    250    301    352    404    461    547    633

\*At particularly favourable heat dissipation condition.

Maximum cable length in meters from motor starter to pump.

For motors with star delta starting, the cable length can be calculated by multiplying the relevant cable length from above table by  $\sqrt{3}$

\*At Particularly Favorable Heat Dissipation Conditions.

Maximum Cable Length in Meters from Motor Starter to Pump.

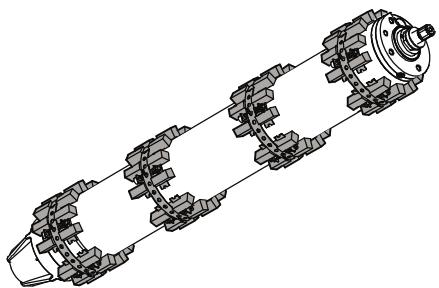

## ZINC ANODES

### APPLICATIONS

Cathodic protection by means of zinc can be used for corrosion protection of QF pumps in chloride-containing liquids, such as brackish water and seawater.

Sacrificial anodes are placed on the outside of the pump and motor as protection against corrosion.

Submersible motor fitted with anode strings

The number of anodes required depends on the pump and motor in question.

### FLOW SLEEVES

Shakti Pumps offers a complete range of stainless-steel flow sleeves for both vertical and horizontal operation. Flow sleeves are recommended for all applications in which motor cooling is insufficient. The result is a general extension of motor life. Flow sleeves are to be fitted in these cases:

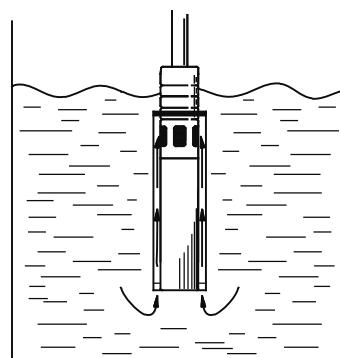

- If the submersible pump is exposed to high thermal load such as current unbalance, dry running, overload, high ambient temperature and bad cooling conditions.
- If aggressive liquids are pumped, since corrosion is doubled for every 10 °C the temperature rises.
- If sedimentation or deposits occur around and/or on the motor.

See example

**Note:** More information about flow sleeves is available on request.

### Example of calculated flow sleeve

The flow sleeve is fitted to the submersible motor so that the liquid passes close by the motor on its way towards the pump suction interconnector, thus ensuring optimum cooling of the motor. See fig.

Flow sleeve function

The flow sleeve is designed so that the flow velocity past the motor is minimum 0.5 m/s and maximum 3 m/s to ensure optimum pump operating conditions.

Use this formula to calculate flow velocity:

$$V = \frac{Q \times 353}{D^2 - d^2} \text{ [m/s]}$$

Q	m <sup>3</sup> /h	Flow rate
D	mm	Sleeve diameter
d	mm	Pump diameter
